DETAILED ACTION

This application was filed 18 February 2000 and claims priority to 60/120,835,
 filed 19 February 1999. Claims 1-12 are before the Examiner.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

3. Claims 1-12 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. Specifically, it is not seen where the instant specification enables the ordinary artisan to determine what compounds would fit the instant claims other than the specific compound that is labeled UIC-98-056. As far as enablement goes, the only transition-state isostere that the instant specification teaches is CH(OH)-CH2. The specification does not enable any other compound other than UIC-98-056 that is bounded by all of the instant claims. It would require undue experimentation for the ordinary artisan to make/use the instant invention without further guidance as to the meets and bounds of the claims.

Application/Control Number: 09/506,988

Art Unit: 1625

- 4. Claims 1-12 are rejected under 35 USC § 112, first paragraph, as having a lack of written description. Specifically, the specification does not describe what a "transition-state isostere" is other than the one specified CH(OH)-CH2. Without knowing what the instant invention needs, the ordinary artisan would find it close to impossible to find a compound that would fit within the bounds of the instant claim 1. What is a transition-state isostere? What compounds other than the specified UIC-98-056 would fit the boundaries of claim 1?
- The following is a quotation of the second paragraph of 35 U.S.C. 112:
 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 6. Claims 1-12 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1-12 are ambiguous due to the phrase "transition-state isosteres". The only definition of this is the moiety CH(OH)-CH2. A chemical dictionary defines an isostere however, it is unclear as to how an isostere can be a transition-state isostere. What other transition-state isosteres are encompassed by claim 12?

Claims 3-4 are ambiguous due to the compound having the ability to inhibit an "aspartic acid protease". Is there more than one aspartic acid protease? If so, do the instantly claimed compounds inhibit all of these proteases or just a few?

Application/Control Number: 09/506,988

Art Unit: 1625

Claims 5 and 11 are ambiguous due to the claim having "UIC-98-056" as the compound. This appears to be a name for the compound could possibly change over time. It would be more appropriate if the compound be named by its chemical name or structure.

Claim Rejections - 35 USC § 102

7. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 8. Claims 1-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Carroll (1) (Bioorg Med Chem Lett 8, 1998, 2315-2320), Carroll (2) (Bioorg Med Chem Lett 8, 1998, 3203-3206) and Baldwin (Structural biology 2(3), 1995, 244-249).

Carroll (1) teaches (see page 2316) core structures in table 1 wherein R4 is (13) that have two of the same groupings identified as transition-state isosteres (CH(OH)-CH2).

Carroll (2) teaches (see page 3203) PL 792 having three groupings of C(O)NH that would appear to fit within the instantly claimed invention.

Page 5

Application/Control Number: 09/506,988

Art Unit: 1625

Baldwin teaches (see page 244) compound A-77003 having the grouping CH(I-Pr)-C(O) twice in the compound having HIV protease inhibition qualities.

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to D. Margaret Seaman whose telephone number is 703-308-4528. Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-1235.
